

Carver Skis Specification Guide

Introduction

Carver Skis are engineered for precision and control on groomed slopes. Designed for intermediate to advanced skiers.

Product Overview

These skis feature a narrow waist and aggressive sidecut, ideal for carving tight turns. They are lightweight and responsive.

Technical Specifications

Length: 160-180 cm, Waist Width: 72 mm, Radius: 14 m, Weight: 3.2 kg/pair.

Construction and Materials

Constructed with a wood core, fiberglass layers, and a sintered base for durability and glide.

Design Features

Includes tip rocker for easy turn initiation and camber underfoot for edge grip.

Performance Characteristics

Excellent edge hold, quick turn response, and stability at high speeds.

Available Sizes

160 cm, 170 cm, 180 cm.

Maintenance and Care

Regular waxing and edge sharpening recommended. Store in a cool, dry place.

Warranty Information

2-year limited warranty covering manufacturing defects.

Conclusion

Carver Skis deliver high-performance carving for enthusiasts seeking precision and speed.
